Dear Friends,

I have problems using Image Ctrl....In other words I can't find it in the layer design...After i have added to my project the Controls4U and i have found the StaticImage control...but in the panel layer, i don't know where i should include the image file to display in my form...

Can Sombody Help Me Please?? I'm Newbie...sorry....Best Regards, Lestroso. :blush:

Hi Lestroso

With StaticImage, you can use function Set(), in two versions:

- bool StaticImage::Set(String fileName): // You open a bitmap filename
- bool StaticImage::Set(Image image); // You open an Image

You have to do that in the code, for example, in a callback function after pushing a button.

Dear Koldo,

in other words.... I can't put an image with the layer editor??? i can only place the area of image...

Could you please give me a simple example to replicate it??

I think i'm starting loving this ide!!! It's very Powerful!! I'm using Mac os x 10.13.6 High sierra.....

I thank you a lot in advance....Best regards, Lestroso :blush:

Hi Lestroso

Here I enclose you a folder with the "Hello World" application changed to load an user selected image. All necessary files are included. The image can be loaded from a file, or embedded inside the executable. Please tell me if you need the last case.

```
This is the .cpp file:
#include <CtrlLib/CtrlLib.h>
#include <Controls4U/Controls4U.h>
using namespace Upp;
#define LAYOUTFILE <HelloWorldImage/hello.lay>
#include <CtrlCore/lay.h>
class HelloWorld: public WithMainHello<TopWindow> {
MenuBar menu;
StatusBar status:
void FileMenu(Bar& bar);
void MainMenu(Bar& bar);
public:
typedef HelloWorld CLASSNAME;
HelloWorld();
};
void HelloWorld::FileMenu(Bar& bar) {
bar.Add("Open image", [&] {
 FileSel fs;
 String file = SelectFileOpen("Image files\t*.bmp *.png *.jpg *.gif\nAll files\t*.*");
 if (!file.lsEmpty())
 image.Set(file);
});
bar.Add("About..", [&] {
 PromptOK("{{1@5 [@9= This is the]::@2 [A5@0 Ultimate`+`+ Hello world sample}}");
});
bar.Separator();
bar.Add("Exit", THISBACK(Close));
}
void HelloWorld::MainMenu(Bar& bar) {
menu.Add("File", THISBACK(FileMenu));
HelloWorld::HelloWorld() {
```

```
CtrlLayout(*this, "Hello World");
Sizeable().Zoomable();

AddFrame(menu);
AddFrame(status);
menu.Set(THISBACK(MainMenu));
status = "Welcome to Hello World!";
}

GUI_APP_MAIN {
    SetLanguage(LNG_ENGLISH);
    HelloWorld().Run();
}

File Attachments
1) HelloworldImage.7z, downloaded 267 times
```

DEAR KOLDO,

I have had success with your code...thanks a lot...but could you please if you can....show me how i can insert in my program an image of mine fixed?and include it in the exe??why i can't with layer gui??(in my case in a app??)...

Ultimate++ is very good!! It's True Crossplatform.....i have tried crossing from apple and windows and that's ok!!...In truth i saw ultimate++ many years ago...but it was only for windows...but now there is also for mac....Best Regards,

Lestroso:d

Hi Lestroso

In Reference/ImI there is a simple example of IMAGEFILE to handle images embedded inside the .exe.

In addition, the Image Tutorial explains a bit about the image designer included in TheIDE. You can edit images or include your own.

After that, you can include this at the beginning:

#define IMAGECLASS MyImages

#define IMAGEFILE <HelloWorldImage/ImageFile.iml> // ImageFile is the name of your .iml file filled with images

#include <Draw/iml.h>

You can handle the embedded images as any Image type.

Please try this demo, read the help, and try to include this in HelloWorldImage.

If it does not work, I will include it for you, but please try it first on your own.
