Hello,

I was installing the microsoft compiler VC++ 2005 express edition once I've read it is free of charge. During the installation it connected to the microsoft site to download it. The message during the download said that it was downloading .NET platform and other stupid things that I do not want (I've unchecked them) for a total of 91 MB! I stopped everything.

Please let me ask you:

- 1) if in order to get the compiler I really need to download 91 MB of rubbish or at the end it download only a part of it.
- 2) the MS compiler has some advantage with respect the Mingw one I'm currently using.

Thank you,
Luigi

- 2) the MS compiler has some advantage with respect the Mingw one I'm currently using.

Thank you,
Luigi

Well, the best compiler so far is MSC7.1 IMO. It is not as C++ compliant as 8.0, but is much faster (compile time) and produces short code.

8.0 is slower, but still better than Mingw.

Unfortunately, at the moment I do not remember what exactly has to be downloaded, but I am afraid download is really huge, much more than 91MB (700MB or so...). Quite stupid to take a commandline compiler from it...

Mirek

AFAIK, MS compiler compiles faster.
My experience is that with MINGW you can't compile some third party programs at all.
I hate MINGW include problems .
I've downloaded gigabytes from MS and still find them useful...

OK, I've downloaded and installed 91 MB of "Visual C++ 2005 express". Now I tried to compile something but... surprise... doesn't work! The error:

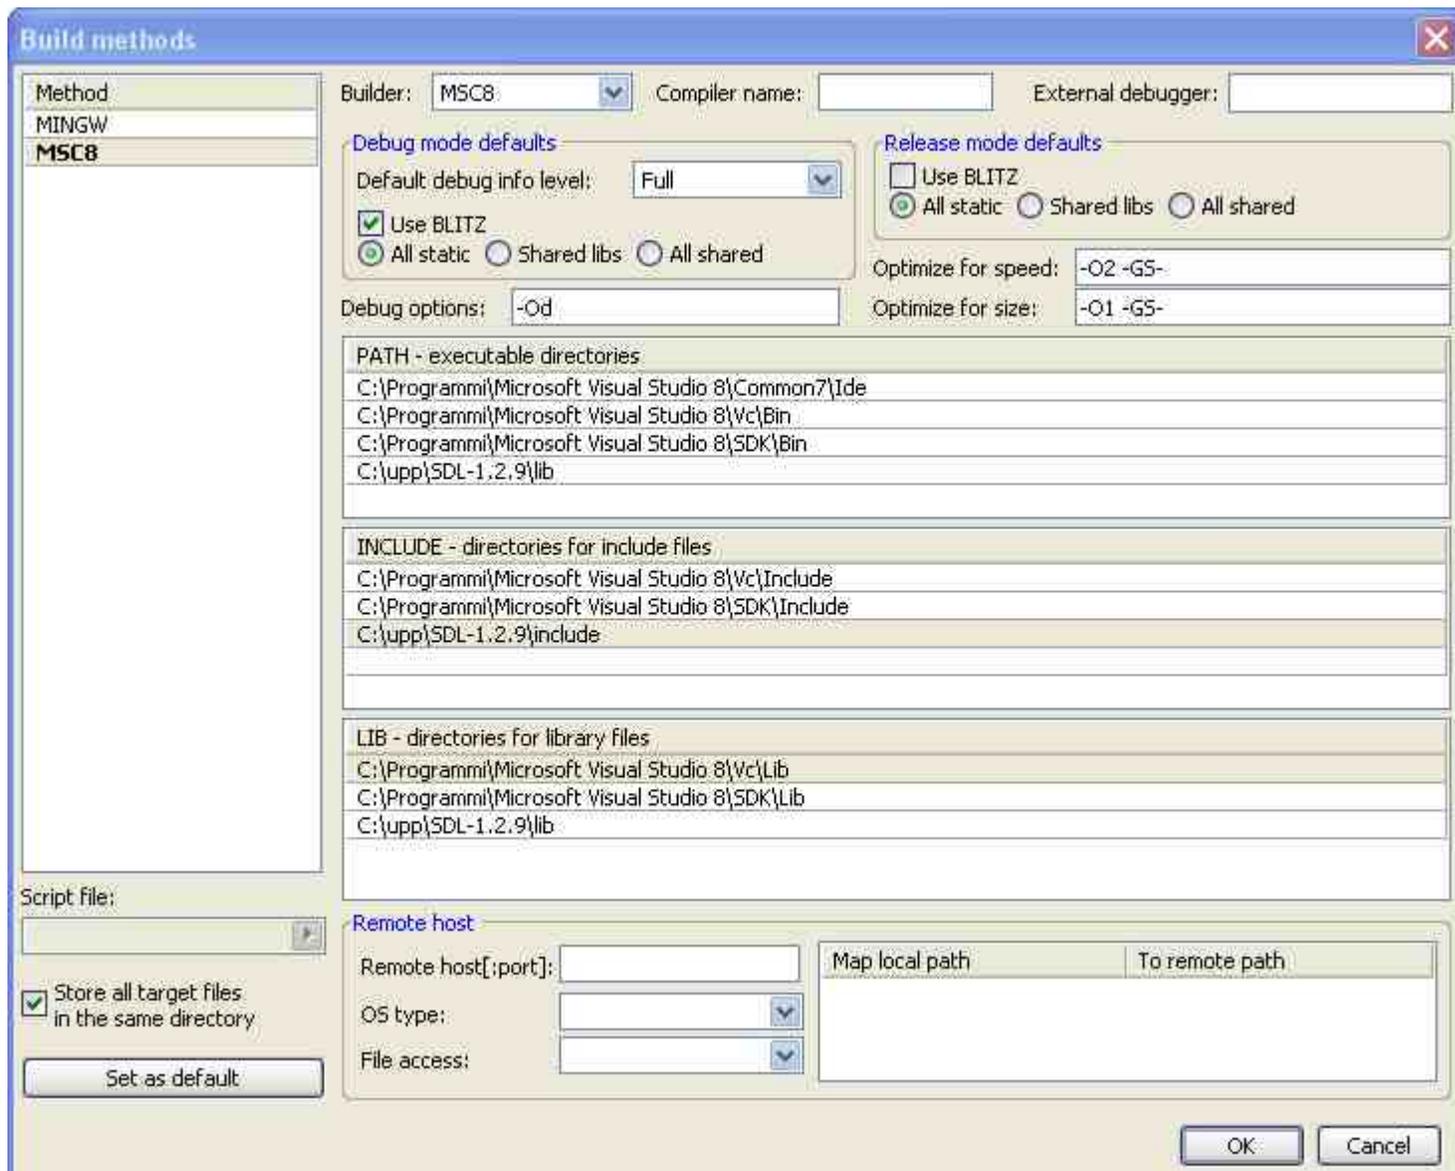

```
----- CtrlLib ( GUI MSC8 BLITZ WIN32 MSC ) ( 1 / 10)
BLITZ: LabelBase.cpp Button.cpp Switch.cpp EditField.cpp Text.cpp LineEdit.cpp DocEdit.cpp
ScrollBar.cpp HeaderCtrl.
  cpp ArrayCtrl.cpp DropList.cpp DropPusher.cpp DropChoice.cpp Static.cpp Splitter.cpp
SliderCtrl.cpp ColumnList.c
  pp Progress.cpp AKeys.cpp RichTextView.cpp RichClip.cpp Prompt.cpp Help.cpp Bar.cpp
MenuBar.cpp ToolBar.cpp Tool
  Tip.cpp StatusBar.cpp TabCtrl.cpp TreeCtrl.cpp DlgColor.cpp ColorPopup.cpp ColorPusher.cpp
FileList.cpp FileSel.
  cpp Windows.cpp Win32.cpp CtrlUtil.cpp Update.cpp LNGCtrl.cpp
$blitz.cpp
C:\upp\uppsrc\Core/Core.h(240) : fatal error C1083: Cannot open include file: 'windef.h': No such
file or directory
CtrlLib.icpp
C:\upp\uppsrc\Core/Core.h(240) : fatal error C1083: Cannot open include file: 'windef.h': No such
file or directory
```

The file 'windef.h' is in /upp/mingw/include. It has nothing to do with the new compiler. Sure I set something wrong, but what?
I suspect the 91 MB I've downloaded are not the MSC8 required by the IDE. I add a picture of the setting.

Luigi

Luigi

Have you downloaded the Win32 SDK?

Have you downloaded the Win32 SDK?

Mirek

In the installation directory there is a SDK directory with other subdirectories as /bin, /lib... I think
yes.

Luigi

edit: I read that about Win32 SDK I've "(core only)" ... in contrast with other edition of the
compiler.

Have you got WinDef.h in your .../SDK/include/ dir? My U++ MSC7.1 compiles it from there...

The include directory in SDK is absent! But I've bin, doc, lib, bootstrapper that I guess are useless without the include one. So the 2005 Express edition is quite useless for U++ purpose...
let's come back to Mingw and remove 91 MB of garbage.

Luigi

Luigi

SDK has to be downloaded separately!

Mirek
