Subject: Unable to run exe file in windows
Posted by shambhavi on Wed, 31 Jul 2019 06:12:31 GMT

Hi,

The program is executing without any errors (both in linux machine and Windows machine) when i copy the .exe file on desktop its throwing an error message saying "This Application was unable to start correctly......"

Can anyone please let know how to solve this issue.

Hi Shambhavi

Please submit us some more information about the OS version, compiler, if the application is GUI or console, etc.
In addition it could be great if you could submit a simple but complete sample of the source that fails.

Dear Shambhavi

The file that you have sent cannot be compiled as it needs two include files. This way, it cannot be checked.
I would require a sample case that can be compiled and run.
