Subject: Filtering an ArrayCtrl

Hi there,
I have some data in json format that I show to users using an ArrayCtrl. I would like to introduce a
feature allowing user to filter the data, but I did not find any suitable method in the ArrayCtrl class.
I found this thread in the forum, but did not quite understand how to implement that solution. How
do you implement a filter function in an ArrayCtrl?
Regards,
gio

ShowLine/HideLine ?

GridCtrl has built-in filtering capability.

Hope this helps.

Thanks, I went for the ShowLine/HideLine solution.
