I tried to compile B605 version and get a compile error in the PDF package complaining about 'ScreenDraw' being undeclared.
Is the PDF package intended to be used under Win32 only, because I can find this class in DrawWin32.(h|cpp) only?

Matthias

Well, it was until recently. In the latest development efforts, we finally got it working in X11.
Perhaps there is some problem in version you are testing (these are wild times now
