Added:
- PrinterJob class
- Glyph composing
- Linux printing
- TheIde:

added support for external additional file dependencies in the package organizer
added automatic dependence parsing for brc files
improved the Build and BuildProject macros to support explicit output file names
added new macro EditFile to open a different package file or a generic file in the editor

Fixed:
- RichEdit: problem with character overhang
- X11 focus problem
- Problem with loading .tr files from .exe dir
- OptionTree: added missing WhenOption call

All of the "GUI_APP_MAIN" programs and "imgsrv" ("CONSOLE_APP_MAIN") in "examples" don't compile under Windows XP with MSC8.

The problem always reads as follows:

"D:\ProgWin\upp\uppsrc\Draw\DrawTextWin32.cpp(61) : error C2664: 'DWORD (HDC,LPCWSTR,int,LPWORD,DWORD)' : cannot convert parameter 2 from ' wchar [128]' to 'LPCWSTR'
Types pointed to are unrelated; conversion requires reinterpret_cast, C-style cast or function-style cast
D:\ProgWin\upp\uppsrc\Draw\DrawTextWin32.cpp(61) : error C2664: 'DWORD (HDC,LPCWSTR,int,LPWORD,DWORD)' : cannot convert parameter 1 from ' LPWORD' to 'HDC'
Types pointed to are unrelated; conversion requires reinterpret_cast, C-style cast or function-style cast"

Werner

This is already fixed and this fix will be in next weekly dev. In the meantime in line 61 of DrawTextWin32.cpp change current line to
(*fn)(hdc, (LPCWSTR) wch, 128, pos, 1);

Confirmed.

Thanks for the immediate response.

Werner
