Hi all-

I am practicing U++. I am having trouble with dates in sqlbool with sqlset situations and also just plain sqlarray.query() commands.. It returned the ID and location just fine.

If anyone has a quick moment can you please take a gander at this small snippet of code and tell me why when I call query of the sqlarray it does not return the date in the sqlarray control?

Code follows: THNX! roboloki

```
#include "fearmonger.h"
```

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
struct WinDlg : public WithWin10Layout<TopWindow> {
```

```
    Button button;  
    SqlCtrls ctrls;  
    EditInt myid;  
    EditDate mydate;  
    EditString myloc;
```

```
    typedef WinDlg CLASSNAME;
```

```
    void exec4() {  
        SqlBool where;  
        SqlBool where2;  
        WinDlg dlg;
```

```
    // SQL * Select(dlg.ctrls).From(SCHEDULE).Where(ID == 3);  
    disturbed.Query();
```

```
}
```

```
    WinDlg() {
```

```
        CtrlLayout(*this, "computer");
```

```
        Title("My application with menu").Sizeable();
```

```
        Add(button.LeftPos(10, 100).TopPos(10, 30));  
        disturbed.SetTable(SCHEDULE);  
        disturbed.AddKey(ID);
```

```

disturbed.AddColumn(ID,"ID").Edit(myid);
disturbed.AddColumn(LOCATION,"loc").Edit(myloc);
disturbed.AddColumn(START_DATE, "START_DATE").Edit(mydate);
disturbed.Appending().Inserting().Removing();
button <=<= THISBACK(exec4);
}
};

```

```
void Cyborg::SqArray(){
```

```

    WinDlg dlg;
    dlg.Run();
    // menu.Set(THISBACK(WinDlg()));

```

```
}
```

```

sqlite> pragma table_info(SCHEDULE);
0|ID|INTEGER|0||1
1|LOCATION|STRING|0||0
2|START_DATE|INTEGER|0||0
3|START_TIME|INTEGER|0||0
4|END_DATE|INTEGER|0||0
5|END_TIME|INTEGER|0||0
6|DESCRIPTION|STRING|0||0

```

Hi all-

I noticed I left out some conversion magic. Here is my attempt at getting the dates to appear in the sqlarray control. They still do not show up! I am out foraging for tips. Please chime in. THNX ROBOLOKI

```

#include "fearmonger.h"

#include <CtrlLib/CtrlLib.h>

using namespace Upp;

struct DateIntConvertCls : Convert {
    virtual Value Format(const Value& q) const;
    virtual Value Scan(const Value& text) const;
    virtual int Filter(int chr) const;
};

Value DateIntConvertCls::Format(const Value& q) const
{
    return IsNull(q) ? String() : ::Format(Date(1970, 1, 1) + (int)q);
}

Value DateIntConvertCls::Scan(const Value& text) const
{
    String txt = text;
    if(IsNull(txt))
        return Null;
    Date d;
    if(StrToDate(d, txt))
        return d - Date(1970, 1, 1);
    return ErrorValue("Invalid date!");
}

int DateIntConvertCls::Filter(int chr) const
{
    return CharFilterDate(chr);
}

Convert& DateIntConvert()
{
    return Single<DateIntConvertCls>();
}

struct WinDlg : public WithWin10Layout<TopWindow> {
    Button button;
    SqlCtrls ctrls;
    EditInt myid;
    EditDate mydate;
    EditString myloc;

    typedef WinDlg CLASSNAME;

    void exec4() {

```

```

SqlBool where;
SqlBool where2;
WinDlg dlg;

// SQL * Select(dlg.ctrls).From(SCHEDULE).Where(ID == 3);
disturbed.Query();

}

WinDlg() {

CtrlLayout(*this, "computer");

Title("My application with menu").Sizeable();

Add(button.LeftPos(10, 100).TopPos(10, 30));
disturbed.SetTable(SCHEDULE);
disturbed.AddKey(ID);
disturbed.AddColumn(ID,"ID").Edit(myid);
disturbed.AddColumn(LOCATION,"loc").Edit(myloc);
disturbed.AddColumn(START_DATE, "START_DATE").SetConvert(DateIntConvert());
disturbed.Appending().Inserting().Removing();
button <= THISBACK(exec4);
}
};

void Cyborg::SqArray(){

WinDlg dlg;
dlg.Run();
// menu.Set(THISBACK(WinDlg()));

}

```

Hi all-

It seems for the sql array query to work you have to have all the fields defined.

It is working now.

Sorry.

thanks. ROBOLOKI

hi AGAIN-

Just wanted to pass along that now the sqlbool and sqlset is working.

Thanks for making this cool project.

ROBOLOKI
