Subject: [REQUEST] Adding "Copy" and "Move" option to TheIDE's package selection menu

Hello,

Sometimes users might want to copy or move an entire package into another assembly or directory.

AFAIK, currently the only way to do this is to manually copy or move the package directory into the desired location.

IMO, "Copy package to..." and "Move package to..." options in the package menu could really simplify this process.

Best regards,
Oblivion

Hi Oblivion,

You can add required package path in
Edit Assembly -> Package Nests with ';' separator.

Hello Deepak,

Thank you for the information!

I sometimes forget that a U++ assembly can be a set of directory paths.

What I really meant is moving or copying a package to another directory, using TheIDE's package menu.

There is already a "duplicate package" entry in the package menu but that entry only creates a

duplicate of the package in the same directory.

Best regards,
Olibvion

Implemented in trunk, please test.

Mirek

Thank you!

Works fine.
It has a small visual problem though: The edit field for target name is too narrow (horizontally)

Best regards,
Oblivion
