Hi all-

I am trying in vain to get something to work right in sqlxp that is so easy in the sqlite console.

```
sqlite> select event from DATES left outer join SCHEDULE on SCHEDULE.id =
DATES.fk_schedule
```

I left out the where clause on the console. I can do this in regular sqlite with calling execute with parameters but want to do it the sqlxp way.

If you can see why sqlxp keeps giving me an assert error, please let me know!

thnx for any help,
roboloki

```
eventGrid.Clear();
Sql sql;
sql * Select(fk_schedule(id,event))
.From(DATES).LeftJoinRef(SCHEDULE)
.On(fk_schedule.Of(DATES) == id.Of(SCHEDULE))
.Where(dt==Date(2019,9,28));
while (sql.Fetch()){
    eventGrid.Add(); }
}
```

```
TABLE_(SCHEDULE)
INT_ (id) PRIMARY_KEY AUTO_INCREMENT
STRING_ (loc,55)
INT_ (fk_task)
STRING_ (event,100)
END_TABLE
```

```
TABLE_(DATES)
INT (id) PRIMARY_KEY AUTO_INCREMENT
INT_ (fk_schedule) REFERENCES (SCHEDULE)
DATE_ (dt)
TIME_ (tm)
DATE_ (dt2)
TIME_ (tm2)
DATE_ (rdate)
TIME_ (rtime)
END_TABLE
```

Hi -

I tried changing the dates in the schema to INT_ . I still get the assert message.

I am headed for bed soon. Work in a couple of hours.

thnx.

Hi,

I just thought of something that might
Fix it. I will look at it after work.
Thnx

Hi all-

I think i figured out this problem.

My code wouldn't work, and I began to suspect that my computer got hacked.

I went and got nmap and ran a port scan. It came back with open ports!

So I decided to tie a rock to that computer and send it to the bottom of the river.

My new computer came back with nmap scans that are fine.

I knew that the sqlexp worked, and it defied logic why I couldn't get it running.

I could only run queries on one table at a time.

Back to sane test results I hope.

Have a cool rest of the weekend.

thanks,
roboloki
