
Subject: Missing SessionClose() in Sqlite3Session::Close()

It causes a lot of weird behaviour when I use APPSQL or Session's Sql object and changing databases while the app is running.

It reads some data from the previously opened database. It is not so good.

So I suggest something like this:

```
void Sqlite3Session::Close() {
    sql.Clear();
    if (NULL != db) {
+ SessionClose();
        int retval;
#ifdef flagNOAPPSQL
        if(SQL.IsOpen() && &SQL.GetSession() == this)
```

#ifdef flagNOAPPSQL
        if(SQL.IsOpen() && &SQL.GetSession() == this)
```

Thanks, applied. rc5 tomorrow...
