Is it possible to escape a character '?' when using Sql class? This character is used as an operator when working with a jsonb type

This is bit problematic as many SQL databases have '?' in their C interface definition and cannot escape it, so general solution (as for all SQL RDBMs) is impossible.

However, it is my understanding that jsonb type is specific for PGSQL. For this parcular SQL flavor, I have added

void NoQuestionParams(bool b = true);

and also possiblity to escape '?' by "??"

Mirek
