Hi guys-

I am getting a lot of these errors.

I tried building postgres 11.5 and 12.x

Any ideas on what I may be forgetting to do?

Error: below

thanks- roboloki

lld-link: error: undefined symbol: PQexec
>>> referenced by C:/Ultimate++/upp/out/MyApps/PostgreSQL/MINGWx64.Debug.Debug_Full\PostgreSQL.o:(_ZN3Upp17PostgreSQLSession9ExecTransEPKc)

hi guys again-

I think my PostgreSQL is almost working. It exited with 0 error code.
No more errors on linking.

I have to reinitialize my db directory for the right version first.

Okay. Its running now. I ran the U++ sample postgres APP.

This weekend I learned:
netstat -ano | findstr :445
downloaded: windows process explorer
recently downloaded: nmap
routersecurity.org has: shieldsUp port scanner too.

I didn't trust the computer this past week .
All cool things to see what is going on with the computer!

thnx.
