Hello community,

I have a programme running a raspberry which allocate some vectors (3-5 vectors of object with ~3 object by vector).

It will sometime look at object of vectors and update it by calling getter and setter.

It run properly for 2 or 3 day then, it will crash with this message :

Any ideas ?

Thanks in Advance
Best regard.

Maybe you are storing pointers to the items in the vector?

thanks for your help Cbpporter, Sadly, I dont store any ptr in my vector however some function return ptr like `A* getAFromName(String nameOfA);`
but I always check for nullptr before doing any operation on myPtr. Also the programme crash only after few days of running.
