Hi everybody,

I have decided that for the next release, the 'main topic' is transition to gtk3 (and perhaps at least partially to pkg-config).

The main reason is that gtk2 has non-existent support for HiDPI displays; I am trying there some magic so it is quite usable, but definitive solution seems to be gtk3.

If you would like to track the progress, development is happening here:

`svn://www.ultimatepp.org/upp/branches/gtk3`

Hello,

I compiled TheIDE against GTK3 backedn and I noticed some things that doesn't work:

- scrolling upward with mouse wheel
- TheIDE window can not be reduced to some given width
- Styling doesn't work... But, I think it will be implemented later.

Sincerely,
Klugier
