FreeBSD port files are attached for impatient FreeBSD users.

Changes:

- few patch file removals, due to integration into source code
- added WITH\_SDL make variable, which defines if SDL libraries should be installed along with upp

[edit]: update of attachment to add pthread library definition for Core package

Hi,

By default I get a linking error with undefined reference to pthread\_\* functions.

Adding the following line to Core.upp solves the problem:

```
library(FREEBSD) "pthread";
```

What do you think about this?

Hi,

yes, thanks .

Core package seems to use pthread functions, so we should add it to Core.upp as it is defined for Linux. I will update the port and hopefully Mirek integrates this library definition to Core.upp. Have you used pthread functions in your own project? Because I get no error when compiling theide using theide itself, which also of course depends on Core package.

I had used your port to build upp. Then ran theide and just tried to compile some examples. I have not used pthread functions. Examples are default 'Single threaded'. Also have not tried to compile theide using theide.

Which examples have you tried to build?

I tried to build every example (in example assembly not the reference one) and did not get this error.

/GCC32.Debug.Gui

...AddressBook, AnimatedHello, Clock

May be we should wait for response from other FreeBSD users?

Hey, FreeBSD users, what is your experience in this issue?

P.S. I use FreeBSD 6.1

Ah, now I see, pthread lib is needed for DEBUG build target. So one could also define library(FREEBSD DEBUG) "pthread"; more specifically to solve this problem. However, than we also need to define library(FREEBSD MT) "pthread"; to be able building multithreaded applications in general.

I am not sure, but maybe there is an OR option for library definitions, something like library(FREEBSD (MT || DEBUG) "pthread";?

Hey, FreeBSD users, what is your experience in this issue?

It seems we are the only one so far , but somewhere I saw a NetBSD user, so at least we are not alone concerning \*BSD issues .

Quote:P.S. I use FreeBSD 6.1

I use 6-Stable
