Subject: Apps are crashing on Windows Shutdown

I tested it with 2019.1, 2019.2 and current (2020-01-11) upp versions Mith MSC 2017 toolchain.
When an upp app is running, shutting down windows stops with a window like attached.

Filed in redmine. I have noticed this too, from time to time, but then we are shutting down windows so rarely these days...

There is a mechanism that reports shutdown to the application, so that it should quit itself properly, probably something is wrong with it.

If you have some spare time for this, search for "OverwatchEndSession" and "EndSession". Maybe moving OleUninitialize at the end of ExitWin32 would help...

Mirek

Yes the problem is there.
So the proposed patch would be the fix of a mistyping in Ctrl::OverwatchWndProc():

```
ONCELOCK {
```

```
    if(HMODULE hDLL = LoadLibrary ("user32")) {
     AutoCast(ShutdownBlockReasonCreate, GetProcAddress(hDLL,
"ShutdownBlockReasonCreate"));
-    AutoCast(ShutdownBlockReasonDestroy, GetProcAddress(hDLL,
"ShutdownBlockReasonCreate"));
+    AutoCast(ShutdownBlockReasonDestroy, GetProcAddress(hDLL,
"ShutdownBlockReasonDestroy"));
    }
   }
   if(ShutdownBlockReasonCreate)
    ShutdownBlockReasonCreate(hwnd, ~WString(t_("waiting for user response")));
   EndSession();
   ELOGW("WM_QUERYENDSESSION 1");
   OverwatchEndSession.Wait();
```
