Hi, I tried the SDLSoundDemo and encountered linking error.

```
----- SDLSoundDemo ( GUI MAIN GCC DEBUG DEBUG_FULL BLITZ WIN32 ) (11 / 11)
main.cpp
plugin/z: 11 file(s) built in (0:02.56), 233 msecs / file, duration = 2567 msecs
plugin/png: 3 file(s) built in (0:05.31), 1773 msecs / file, duration = 5319 msecs
Core: 67 file(s) built in (0:26.93), 401 msecs / file, duration = 26930 msecs
SDLSoundDemo: 1 file(s) built in (0:06.40), 6400 msecs / file, duration = 6400 msecs
Linking...
lld: error: unable to find library -ISDL2
collect2.exe: error: ld returned 1 exit status
```

Please advise how to fix it or what lib missing with it.
Thank you very much.
My case is win10 + up-mingw-13664.

This depends on SDL2, which at the moment does not seem to work with mingw.

Sorry to know that SDL2 is not work with mingw.
Thank you for your advice.

I have actually looked into it and managed to fix it. All should work with next nightly.
