Hello,

I had a working script

<https://www.ultimatepp.org/forums/index.php?t=msg&th=10801&start=0> (see below)

```
void fileupload::Upload()
{
    String url = "http://localhost/uploads/transfer.php";
    HttpRequest r(url);
    String fn = "C:/upp/out/MyApps/MSBT17.Gui/test.pdf";
    String s = LoadFile(fn);
    r.POST();
    r.Part("file", s, "multipart/form-data", fn);
    r.Execute();
}
```

able to perform a file upload.

Now the same script must work on a new server that manage the https protocol. Unfortunately it no longer works (perhaps some bad server setting).

I wonder if the previous script could have problem in case the server accept HTTPS.

Thanks,

Luigi

EDIT: the problem was solved by Oblivion in another related post.

I missed to add Core/SSL package to the app, and `#include <Core/SSL/SSL.h>` in the source code.
