
Subject: [SOLVED] Layout Designer : TheIde crash in the submenu "Input Fields"
Posted by [omari](#) on Tue, 10 Mar 2020 10:31:09 GMT

[View Forum Message](#) <> [Reply to Message](#)

to reproduce, try to add an "EditString" to a layout in the layout designer .

Env : MacOS.

I believe you and in the past, I got some similar crash.

Unfortunately, I have hard time to reproduce that (I have just tried with freshly created project and it works).

I think it might depend on many other factors. If it crashes consistently for you, that would be great, can you e.g. share the package where it crashes?

it crash with theide, tutorial/Gui16, and even with a new project.

```
***** ASSERT FAILED: Assertion failed in  
/Users/omari/upp.src/uppsrc/CtrlLib/MacMenu.mm, line 83
```

line 83:

```
virtual void AddCtrl(Ctrl *ctrl, int gapsize) { NEVER(); }
```

adding RDUMP in LayDes::Group(Bar& bar, const String& group)

```
for(i = 0; i < type.GetCount(); i++) {  
    RDUMP(type[i]);  
    bar.Add(type[i], GetTypeIcon(type[i], w, h, 0, SLtGray),  
            THISBACK1(CreateCtrl, type[i]));  
    if((q++ + 2) % 16 == 0)  
        bar.Break();  
}
```

then the output is :

```
type[i] = Calendar
type[i] = Clock
type[i] = DropDate
type[i] = DropList
type[i] = DropTime
type[i] = DropTree
type[i] = EditDate
type[i] = EditDateNotNull
type[i] = EditDateSpin
type[i] = EditDouble
type[i] = EditDoubleNotNull
type[i] = EditDoubleSpin
type[i] = EditField
type[i] = EditInt
type[i] = EditInt64
***** ASSERT FAILED: Assertion failed in
/Users/omari/upp.src/uppsrc/CtrlLib/MacMenu.mm, line 83
```

after more DUMPS i found that the call to AddCtrl is in Bar::Break()

```
void Bar::Break()
{
    AddCtrl(NULL, (int)NULL);
}
```

as a test, i comment this line and it work without crash.

as a test, i comment this line and it work without crash.

I am already there too, but now it started to crash on closing the menu... So more work to be done there.

I am already there too, but now it started to crash on closing the menu... So more work to be done there.

After about 10 hours of bug hunting, I have discovered the issue behind the crashes (https://github.com/ultimatepp/ultimatepp/commit/e19b374a45aa_fa4214860f015b877a97a4d3e880 - invalid static cast in LayDes.cpp), so the issue is now finally fixed to my satisfaction.

Mirek
