I have added some more std:: containers to "pretty" debugger display, as shown in this screenshot of all currently supported types:

Added all remaining stl containers and also support for Image - that one is especially nice I think:

Neither U++ containers nor U++ strings are displayed on Linux.
Maybe I'm missing something, but full rebuild didn't fix the problem.

Linux.

Maybe I'm missing something, but full rebuild didn't fix the problem.

Yeah, the reason is that it only works in Windows with PDB format :)

I plan to start using LLDB libraries for the next release, but that is quite a lot of work...

I meant regular U++ containers like Vector, and regular U++ String, not STL classes ...
Basically, debugger on Linux is broken ...

Thats the same issue. I cannot do it with GDB... Debugger in Posix is simply the same, unchanged, as before.
