Hello community,

I have made few test over some skylark tutorial and it appear they are not working in latest Upp version (14205).
See by example Skylark01 (Assembly tutorial) it should return me hello world on the default root (localhost:8001) but it only return Page not found.

Can someone help me ?
Thanks in advance.

Ok after, looking at code, it work, the root to use is
localhost:#PORT/#NameOfSKYLARKAPP/#HANDLER

the Name of Skylark app is defined in variable named root in SkylarkApp object :

```
 struct SiteWebUOGL : SkylarkApp {
  SiteWebUOGL() {
   root = ""; //Default root (localhost:80)
   //root = "MyCustomApp"; //root = (localhost:80/MyCustomApp)
   port = 80;
  #ifdef _DEBUG
   prefork = 0;
   use_caching = false;
  #endif
  }
 };
```

Hi

It is not working as expected.

But it works as

http://localhost:8001/myapp

In fact all examples are working like this.
