Subject: Input field in dark mode looking ugly

Hello,

I do not know where to post this issue. Maybe it is related even to others OSes.
In dark mode the input field does not look good. In the below picture you see the selected input field that is hilighted yellow but its content is not readable. A better combination of colour would be desirable.

Can I do something to improve it?

Thanks,
luigi

Hi,

it is hard to find out from the screenshot which kind of widget that actually is...

Can you e.g. post a simple testcase?

Mirek

Can you e.g. post a simple testcase?

I tried to make a test case but with no success.
Then looking at the code of my program I found the row responsible of my problem

EditField::StyleDefault().Write().focus = Yellow();

:blush: After removing it everything was OK.
Sorry for the false alarm.

Luigi

OK, that explains it :)

General quick fix is to use SYellow.

Mirek
