Subject: CodeEditor and huge dialog boxes [BUGS]

Hi U++ Developers,

Came across U++ through an article on osnews. Though I am pretty much new to it, I am already impressed! Keep up the good work.

Is there a place I can file bugs? I found a couple of them on the build 511. I am using it on Ubuntu breezy.
* The dialog boxes like 'create new package' and 'build methods' have a very large window size which goes out of the desktop bounds (and I have a 1200x800 resolution)
* theIDE editor behaves a little weird. Once I press and release shift, the editor stays into select mode. (Maybe this is the behavior the coders had in mind?). I couldn't find a way to turn off the selection mode, except to move the mouse pointer.

Sorry if these are features and not bugs and thanks for a great framework!

Thanks. The resolution problem is likely caused by rescaling the dialog because of different (bigger) font. We have tried to fix size of dialog, obviously New Package was left out.

I will investigate shift problem further, however I have not noticed it yet (and I am using Breeze too), so please be prepared to give more detailed information when I finally get to it
