Hi all-

I'm running my very small application (it only has 5 or 6 dialogs so far). If I run code from my
menu, I can run it with sql until I am blue in the face. When I start to open up other dialogs and
switch back I get a msg. that says something about invalid memory access. I run a gui with a main
section for my main window. This is the menu system to launch other forms. I'm using Ubuntu
xfce. Any ideas why it works and then crashes when I am switching dialogs? Thnx - roboloki

```
bar.Add("check master", [=] { showmaster();});
   bar.Add("check detail", [=] { showdetail();});
   bar.Add("Account Maint.", [=] { showaccounts();});
   bar.Add("Subsidiary", [=] { showciti();});
   bar.Add("Purch. Journal", [=] { showpj();});
   bar.Add("Exit", [=] { Exit(); });
   }
   void MyMain::MainMenu(Bar& bar) {
      bar.Sub("Menu", [=](Bar& bar) { SubMenu(bar); });
   }

 void MyMain::showaccounts() {

  // show check master

     App2 app2;
     switch(app2.Run()) {
     case IDOK:
         break;
     case IDCANCEL:
     Exclamation("Canceled");

  }
   }
```

I use this code for each dialog with an okay and cancel button:

```
ok.Ok() <<= Acceptor(IDOK);

cancel.Cancel() <<= Rejector(IDCANCEL);
```

Hey guys,

It is really cool. I am using the debugger for the first time ever. It is telling me it is a connection issue with my postgres.

I will have to check into that.

Thanks,
roboloki

Hi,

One quick observation about your code.

You are calling OpenDB3() in every function.

Generally it should be enough once in init phase.

HI deep-

Yeah, I figured that out since the last time I checked in. Another thing I did is when using the grid, I have to use SQL instead of like Sql sql(m3_session) ... and I can't use if(!OkCommit(m3_session, "Unable to delete transaction data.")) with the grid either. I need to use a regular Commit();

The debugger put me on to what I did wrong, and it is exactly like you said.

I've got my little programming running with no invalid memory access now. HOoray !

I obviously have more work to do though.

As always, thanks for the cool help :)
