Subject: [BUG - Solved] After copying theide.desktop TheIDE icon is not present in the toolbar

Hello,

I am just testing theide.desktop solution and TheIDE icon is not present in the toolbar. It seems that theide.desktop should do not use path:

Icon=/home/klugier/upp/.config/u++/theide/theide.png

Instead of it icon should simple called

Icon=theide

And image content should be copied to /home/klugier/.local/share/icons/hicolor/${resolution}. Then everything should work correctly.

Sincerely,
Klugier

It should not be present in toolbar. What really happens depends on DE.

I have so far only tested with MATE and LXDE. In both of these systems, TheIDE immediately appears in the menu, with proper icon.

I will write to docs something like "not guaranteed to work".

That said I will investigate the icon situation....

Well

https://specifications.freedesktop.org/desktop-entry-spec/desktop-entry-spec-latest.html#recognized-keys

It is definitely allowed to be absolute path... If it does not work, file a bug with your DE provider

(Solution you suggest feels quite fragile to me.)

BTW, thinking about it, maybe the issue for your DE (KDE?) is "++" in the path? Could you test that theory?

Hello,

Problem solved. Rebooting computer solves the issue.

Sincerely,
Klugier
