As one of last preparation steps for Chameleon, I have refactored iml interface:

- iml now strictly requires and uses solely IMAGECLASS kind. Other variants are removed (they were not used anyway..)

- Each iml file now also has index-based interface. E.g.:

CtrlImg::exclamation();

and

CtrlImg::Get(I_exclamation);

are equivalent (in fact, former is implemented by later).

- iml now supports writes:

CtrlImg::Set(CtrlImg::I_information, Win32Icon(IDI_INFORMATION));

IMAGECLASS::Reset (CtrlImg::Reset) then reverts to original .iml content.

That's a great news. I had image name conflicts to resolve from time to time
