Your screenshot tells me that you are trying to build for Linux ...
You just need to run "make" in the root of U++ source code.

I cannot attach a prebuilt app because it is too big, but I can send it to you via Telegram if you have an account.

Theoretically, you should be able to download it via this link.

Hi

I did not test U++ for mac but, there are 3 tarballs. One for Windows, one for Linux, and another for MacOS.

Did you download the MacOS tarball from there:

[https://www.ultimatepp.org/www\\$suppweb\\$download\\$en-us.html](https://www.ultimatepp.org/www$suppweb$download$en-us.html)

You just need to run "make" in the root of U++ source code.

My apologies. I tried to build TheIDE and umk on Mac using makefiles myself and got the same problems.

Please use prebuilt version of ide I uploaded on Telegram. It is built on MacOSX 10.13.
