---

Hello,

I have used ParseJSON in the past with success, but today I am fighting with it and I gave up after two hours of struggle.

The following program make a call to a site and get as string a JSON file. This is what I get with my current IP:

```
{"abbreviation":"CEST","client_ip":"151.53.2.14","datetime":"2020-06-04T22:47:26.435741+02:00",
,"day_of_week":4,"day_of_year":156,"dst":true,"dst_from":"2020-03-29T01:00:00+00:00","dst_offset":3600,"dst_until":"2020-10-25T01:00:00+00:00","raw_offset":3600,"timezone":"Europe/Rome",
unixtime":1591303646,"utc_datetime":"2020-06-04T20:47:26.435741+00:00","utc_offset":"+02:00",
,"week_number":23}
```

Then I use ParseJSON to get the "utc\_offset" field. This is the program:

```
#include <Core/Core.h>

using namespace Upp;

CONSOLE_APP_MAIN
{
    String url = "http://worldtimeapi.org/api/ip";
    HttpRequest req(url);
    req.KeepAlive(true);
    String content = req.Execute();
    Cout() << content << "\n";

    Value js = ParseJSON(content)[0];
    String UTCoffset = AsString(js["utc_offset"]);
    Cout() << UTCoffset << "\n";
    req.Close();
}
```

Unfortunately UTCoffset is empty, i.e. I am not able to grab the value associated to "utc\_offset". I tried several other way but no success.

What am I missing? (here is the url to test the site and get the json file

<http://worldtimeapi.org/api/ip> );

Thanks a lot,

Luigi

EDIT: After sending the post I looked better the file format and noticed the lack of square bracket!  
With this correction

```
Value js = ParseJSON( "["+content+"]")[0];
```

it works.

Sorry for the false alarm
