Hi,

How to toggle on/off word wrap in LineEdit/DocEdit?

I'm looking for a simple 'EnableWordWrap(bool flag);' solution just like it works in e.g. Windows Notepad.

Best regards,

Tom

Actually CodeEditor seems to be an even better fit to my needs, but the already existing WordWrap(bool b); does not seem to have an expected effect. Is there an easy way to change the word wrap behavior in CodeEditor to resemble that of Notepad?

Best regards,

Tom

I just checked in TheIDE and it works as expected.

Now checking in notepad I think you need DocEdit. That said, in my terminology that is not word-wrap (which I understand as breaking too long lines) but paragraph editor (where "LF" ends single paragraph instead of line).
