Do you know if it is possible to set a '+' like tab in TabBar to add tabs like in Firefox?
Example:

I have implemented some tricks to include it. However it is not easy to do it completely as in Firefox or other software without altering TabBar sources :(
It would be nice if the author of TabBar could help out.

With few changes and fixes, user code can allow or not the close tab button, and decide if drag and drop is allowed.
Foe example, these '+' and "New tab" special tabs are handled by simple user code, and nothing special is added in TabBar to handle them.
After additional tests, the changes will be proposed in Redmine.

As Style was hardcoded in static const, a new dynamic Style handling is proposed, based in other U++ controls. This is a sample:

Hello Koldo,

+1 for this. I was missing something like this in TabBar.

Thank you for your efforts!

Best regards,
Oblivion

:)

Added in Redmine here.
If changes are allowed I would like to document them.

Hello Koldo,

Did you consider creating PR on GitHub? The code review process can be executed there.

Sincerely,
Klugier

Sincerely,
KlugierSorry Klugier

I do not know what do you mean. What is PR?

Dear Klugier

I have found that "PR" may be pull request in GitHub.

It is possible to recognize that in the present day GitHub is very much in vogue. Even I use it, because it is a good tool.

However, in U++ the official way for submitting change proposals and issues is Redmine.

Your effort to propose GitHub is remarkable. However, without first solving the U++/GitHub integration problems that exist, doing U++ source management through GitHub not only doesn't add value, it adds extra work.

The contradictory messages, what they cause, is that in the end the reliable way to propose improvements and changes that we all use is through this Forum.

I sincerely believe that, first and foremost, the integration of U++ and GitHub, also thinking about how SVN fits into this equation, has to be solved. If a way is found that Mirek supports, I assure you that I will push, among the best, the implementation of GitHub in U++.

Thank you Mirek. It works.
