Subject: Edit controls are focused even not being the first

I have realised that in a window, if you have for example some Switch and a EditInt, the EditInt is focused just after opening the window, even if it is not the first/topmost Ctrl.

Is it possible to force focusing other Ctrl?

Any idea to avoid an Edit to be forcedly the focused Ctrl when opening a window?

Use ActiveFocus.

The reason why Switch does not get selected is that it has NoInitFocus flag active...

Excellent!

InitFocus(true) does the trick.

PD: ActiveFocus() does not exist.

PD: ActiveFocus() does not exist.

TopWindow::ActiveFocus(Ctrl&)
