Hello, theIDE crash on virtual function lookup window

-Open theIDE
-Select a random package (clock for example)
-Select a place in the inheritted class from TopWindow
-Press Alt + V to open virtual method window
-Press Key_Down one or two time (the down arrow key)
-Then press R

TheIDE will crash

I have tested on the last trunk and everythings is fine.

That's really strange because just before trying the last trunk I have replicate the crash something like 10 times.
So I tried the last trunk and seen everythings was good. Then right after trying the last trunk I tried to replicate the bug again on the old version of TheIDE and everythings was just fine 8o

Anyway, the problem is solve so this thread can be deleted
