Subject: Replace function in TheIDE

Hello,

[606-dev2]
I wanted to replace "endl" with "\n" using the replace option of theIDE. Unfortunatly the routine added a "real newline" at the place of '\n'.
I think the routine should make a difference between
\n
and
"\n"
in that the last one should be substituted without any modification.
Luigi

Luigi,

"\\n" should work for you.

Regards,
Victor

Yes, it works ,
thank you,
Luigi
