When I try to compile TheIDE with latest source using CLANG or MSVS I always face the same error (FLAGS: GUI BM: CLANGx64 Release OS: W10) :

Googling this ndisasm.a don't help at all. That's why I wonder if anyone here can help me ?

I have tested to compile the trunk right now, it was fine...

I can confirm this. Clang-mingw.

Linking...

lld-link: error: duplicate symbol: imaxabs

>>> defined at

/home/ssg/.local/soft/bb-worker/worker/mingw-upp/build/.cache/upp.out/plugin/ndisasm/CLANG.BI
itz.Gui.Win32/ndisupp.o

>>> defined at

/home/ssg/.local/soft/bb-worker/worker/mingw-upp/build/.cache/upp.out/plugin/ndisasm/CLANG.BI
itz.Gui.Win32/disasm.o

lld-link: error: duplicate symbol: imaxabs

>>> defined at

/home/ssg/.local/soft/bb-worker/worker/mingw-upp/build/.cache/upp.out/plugin/ndisasm/CLANG.BI
itz.Gui.Win32/ndisupp.o

lld-link: error: duplicate symbol: strcasecmp
>>> defined at /home/ssg/.local/soft/bb-worker/worker/mi
The problem was introduced on August 29, 2020.
plugin/ndisasm: updated to 2.12.02 (thanks coolman)
git-svn-id: svn://ultimatepp.org/upp/trunk@14932 f0d560ea-af0d-0410-9eb7-867de7ffcac7

That is really weird. There even is no "imaxabs" string in ndisasm sources....

Have you tried "rebuild all"?

OK, sorry, reproduced. It only fails in release mode, debug compiles fine...

Hopefully fixed. Such idiocy, this was in "ndisasm/compiler.h" header:

```
# ifndef inline
#  define inline
# endif
```

Now guess what happens if you do this and then include some headers with inlines.... In debug the effect was hidden by BLITZ, that is why I have missed this...

What could be the purpose of removing inline keyword ? 8o

Well the problem is fix, thanks !
