I just tried to compile the BRC package in reference assembly using the contained macro.
The build process seems to finish without errors, but the brc/ship package is not build as it should be. I get no executable for brc/ship.
Any idea?

Matthias

It was just a problem of case sensitivity, I changed BRC/ship to brc/ship in ship.usc and the build process does something. I guess this error does not occur on win32 since folder/file names are case insensitive.
But now I get a 'no matching function' error on BZ2Decompress(MemReadStream).
