Subject: [SOLVED] Skipping package building/linking when certain configuration is on

Hello,

I would like to ask - is there any option to skip package building/linking when special flag is set. In my case I would like to have plugin/gtest attached to my main package, but when certain main package configuration is present I would like to skip compilation and do not link with this package. I would like only build it when flagTEST is set as main configuration.

Thanks to that I should be able to store my unit tests in the main package, which is nice for productivity. Go lang is using similar approach with it's _test sufix.

Optionally license files should take into consideration this option.

Hi Klugier,

using package organizer, you can add package when a flag is defined.

here an example :

in this example, the package PdfDraw does not build nor link on Windows.

Hello Omari,

Make sense - thank you!
