Hello

I was running clang with option "-Wall" and this caught the following :

```
/home/tommie/Programming/ultimatepp/uppsrc/plugin/ppm/ppm.cpp:32:18: warning: overlapping comparisons always evaluate to false [-Wtautological-overlap-compare]
```

```
if(maxval <= 0 && maxval > 65535)
```

```
~~~~~^~~~~~
```

```
/home/tommie/Programming/ultimatepp/uppsrc/plugin/ppm/ppm.cpp:27:19: warning: overlapping comparisons always evaluate to false [-Wtautological-overlap-compare]
```

```
if(size.cx <= 0 && size.cx > 99999 || size.cy <= 0 || size.cy >= 99999)
```

```
~~~~~^~~~~~
```

which, I assume, is indeed not intended like this?

You are absolutely right, thanks, fixed in trunk.
