Hi, I'm experiencing some issues with RegExp.

When doing a simple match, all is fine *if* a match is found. Otherwise, I get this error:

Assertion failed in D:\Upp/uppsrc/Core/\/cont.h, line 119
i >= 0 && i < items

Then, I need to do a multiline search, and it basically never goes past a single line, giving the error above. I use x.SetOptions(RegExp::MULTILINE), but it doesn't work even if I pass the option directly in the constructor.
