Firstly I must say, U++ is the bomb. I have only been coding in C++ for three weeks and have managed to write a server, reporting Application, Setup wizard and Server Administration tool.

I just want to list a few things that would be nice to have in the IDE.

1. Collapsing like Visual Studio.
 2. #pragma region like in Visual Studio.
 3. A shortcut menu in the project window to add new c,h,hpp,cpp etc file.
 4. When ref a dll, the ability to debug it in the calling application.
 5. A Solution style where you can create more then one project in one solution.
 6. Close a Project and open a new or existing project from the current open IDE.
 7. U++ DLL template for WIN32 and a U++ SO template for Linux
 8. Warnings for Code Porting from WIN32 to Linux and visa versa. In other words, if you write a piece of code it can warn you that the code will not compile in Linux.

Thanks.

6. - try "Set main package.." in the File menu.

8. Warnings for Code Porting from WIN32 to Linux and visa versa. In other words, if you write a piece of code it can warn you that the code will not compile in Linux.

Any more progress with this?

Yes, I copied it to ToDo

Anyway, seriously, most of this stuff is pretty hard to do. However, number 5. is something I quite strongly desire myself...

Fudadmin, is this your new logo really necessary? It's really disturbing...
