I would like to create a 3 way benchmark U++/std::C++/Rust of https://www.ultimatepp.org/www$uppweb$vsstd$en-us.html

I am not sure I would create the optimal Rust version...

Definitely interesting. But I'm just starting with Rust so I'm not the right person to build the best optimised version...

The more I am digging into the Rust book, the more I find their memory concepts close to what I discovered with U++ (pick/borrowing etc.) So I think this benchmark would be extremely interesting!
