how to produce in the code "a double click" either in a simple field or selecting a line in a grid? Do you have an example that shows how I do this?

thanks!

I'm sorry, it has a lot of code and it took me a while to find this documentation.

I found it in "examples" and "SQLApp"

-> book.WhenLeftDouble = THISBACK(EditBook);

if you want you can close this topic.

appreciate

Not all examples are updated to reflect latest improvements in U++. Here it is worth mentioning that lately you can completely specify the action using lambda:

book.WhenLeftDouble << [=] { some code describing what should happen };

without even defining another method.

Mirek
