Subject: Where / how to change default output directory for theide?

using version 14804 on linux

I always compile theide from downloaded svn sources & then copy the executables to my ~/bin.

Now I want to change the output directory(Debug,Release) for theide when it compiles my apps but cannot find where or how to change it (currently it is where I compiled the downloaded sources but I want it elsewhere).

thx

Hello Slash,

Just edit assembly setup "Output directory" field. Screenshot below:

aaaaah of course - I looked everywhere except there & when I saw the pic it clicked!
thx dude
