Hello,

just a little question, i using Windows to write my code. And the destination machine is under Linux Debian.
Actualy i recompil my code under Linux.

It's possible, under Windows, with MinGW64, to create Linux binary ?

Best regards !

I believe it would be pretty difficult.

Get VirtualBox

It is not just a compiler. You will need a lot of libraries installed.
I'm personally doing this in a completely opposite way: I compile for Windows on Linux.
This is easy to do. Upp supports cross-compilation.
