would anyone have an example for "reports" involving
_master / detail
_evaluate the height of objects printed on the page, to jump to the next page

thanks

I know that the spirit is collaborative, I understand, that not everyone has the same difficulties.
After 20 years, I abandoned Delphi, started in January for Java (I already migrated 2 applications)
but I need to work with a native language and chose C ++ 2 months ago. I liked u ++ and I know it
is complex at first, and I depend a lot on the spirit of solidarity and understanding of you who are
on the other side of the ocean. I thank your guardian angels!

who is the expert who created the report module for U++ ?

Hello BetoVallee,

You can have a look at the uppsrc/Report package (it's a good starting point)
All reports are based on générating a qtf document which is rendered in the end

Take a look at the following packages en reference assembly
 * Reports
 * RichTextLayoutTracer
 * Watermark

There is also a dedicated reporting package : bazaar/RepGen and bazaar/RepGenTest

You should also need to check this:

https://www.ultimatepp.org/srcdoc$RichText$QTF_en-us.html
