I checked out SVN revision 24 tonight and tried to compile this version with theide 606.r11.
I am getting compile errors in SSettings.cpp complaining about missing sDialog and SPaper().
Furthermore I get a compile error in X11App.cpp on undefined ChSync function. I think it has to be sChSync, right?

Matthias

Try to update your repository now. I don't know if it helps to fix compilimng upp under linux but at least you can try (recently lot of changes is releated to win32 platform).

Most likely not, frankly, I have not built in Linux since the start of work on Ch.

Going to do that now....

Thanks for the quick fix, it builds fine now.

Matthias
