does it mean that I can now install U++ to win32 os?..  
you have told that 32x version of U++ is no more supported...  
Or is this topic only about installation of applications developed with U++ for Win-32 os ?

yes I know - helps in developing process (e.g. to log changes done & rollback if needed) & version control & helps to interact among developers of different modules in one project... :blush: I've just thought that perhaps this news concerns U++ win32 development on git... but you probably meant simply win32... Anyway, thanks for news
