Hi,

There is a bug when multiselect is used in the GridCtrl.

You can test it on GridCtrlTest in the reference. On main tab hold CTRL an left mouse button click on line 7, line 3, line 9, line 4, line 10. When you click on line 10 you get:

ASSERT FAILED: Assertion failed in uppsrc/Core/Vcont.h, line 182
i >= 0 && i < items

BR, Radek

Tested:
Linux ul001998 5.4.0-56-generic #62-Ubuntu SMP Mon Nov 23 19:20:19 UTC 2020 x86_64
x86_64 x86_64 GNU/Linux

Ubuntu clang version 10.0.1-++20200708122807+ef32c611aa2-1~exp1~20200707223407.61
Target: x86_64-pc-linux-gnu
Thread model: posix
InstalledDir: /usr/bin

Thank you for reporting, should be now fixed.

If you had time to test it thouroughly, it would be great!

Mirek

Hi,

Your patch worked and the GridCtrlTest in the reference assembly is OK.

But I still have a problem with GridCtrl (see attached archive). When I select one row (e.g. 9), holding the CTRL and select another row (e.g. 15) I got the same error as from the first post. What am I doing wrong?

ASSERT FAILED: Assertion failed in uppsrc/Core/Vcont.h, line 182
i >= 0 && i < items

BR, Radek

Hi,

I found another problem with GridCtrl selection. When you select e.g. line 9 and then execute menu: Data->Data 2. You will get selected rows although none should be selected.

BR, Radek

Hi,

I download v15764, windows 10, 64bits

and doesn't work as expected ie

```
gridCta.Searching();  
gridCta.SetToolBar(BarCtrl::BAR_BOTTOM);  
gridCta.MultiSelect(false);
```

after starting with the line above,
in the grid I click with the right button and it displays
menu to select all. Having chosen not to do multiple selection,
what is the reason for selecting all?

if I go to the source and inhibit the menu call,
works as intended.

Or have solution without changing the source?

GridCtrl.cpp

```
if(multi_select || !select_row)
{
    SelectMenu(bar); // if inhibiting this line its works as expected
    isitem = true;
}
```

Thanks

Hi,

in source code this work fine to me:

```
if(multi_select || !select_row)
{
    //when MultiSelect is set to false, it will not display a selection menu.
    // otherwise it will display the menu and the selection of multiple records. In this
situation,
    // the issue of copies of records must still be properly configured.
    if(multi_select)
        SelectMenu(bar);

    isitem = true;
}
```

Thanks!

in time: as a suggestion the two lines below, to display if configured the clipboard is configured to display or not.

```
void GridCtrl::ClipboardMenu(Bar &bar)
{
    bool c = IsCursor();
    bool s = c || IsSelection();
    bar.Add(t_("Copy"), THISBACK(DoCopy)).Image(CtrlImg::copy()).Key(K_CTRL_C).Enable(s &&
copy_allowed);
    /**added line below
    if(cut_allowed)
        bar.Add(t_("Cut"), THISBACK(Nothing)).Image(CtrlImg::cut()).Key(K_CTRL_X).Enable(s &&
cut_allowed);
    /**added line below
    if(paste_allowed)
        bar.Add(t_("Paste"), THISBACK(DoPaste)).Image(CtrlImg::paste()).Key(K_CTRL_V).Enable(c
&& paste_allowed &&
        IsClipboardAvailable());
    if(extra_paste)
        bar.Add(t_("Paste as"), THISBACK(PasteAsMenu));
}
```

Thanks
