if I configure the report margin, the way below I can't get results
as the image in the attached file
depending on the code below

```
Report r;
```

```
r.Margins(100,100);
```

```
String s = "myTextReport";
```

```
r << s;
```

How should I do?

thanks!

within the same question, how do I set a margin for a table? (following the code below)

```
String tab;
```

```
tab << "{{1:1:1:1:1:1:4 A:: B:: C:: D:: E:: F:: G (wider)";
```

```
for(int row = 0; row < 10; row++)
```

```
for(int column = 0; column < 7; column++)
```

```
tab << ":: " << row << ":: " << column;
```

```
r << tab;
```

note: I saw in the U ++ document that a margin should be "<number", but if you put it in the example above as

```
"{{<200 1:1:1:1:1:1:4 A:: B:: C:: D:: E:: F:: G (wider)"
```

generates inconsistency!

How do I do?

thanks

If you plan on directly writing QTF, then use the QTF desognor to help you (it is embeded in Theide)

ok, even with the QTF designer "facilitator" I can't get the margins questioned! The question involves knowledge about the definition of margin and is not in any of the examples offered.

Ok! now i understando about QTF designer, and how explore the issue via the "editor" button where I clear everything and draw a table considering the desired margin.

It worked, thank you for your attention!

Thanks

Merry Christmas!
