Hi,

how do i create a routine go to a certain page of the report?

Hi,

the procedure

ReportView::ScrollInto(int toppage, int top, int bottompage, int bottom)

allows you to navigate through the pages using the scrollbar, but I haven't really found the meaning and also an example of the parameters toppage, top, bottompage and bottom.
could someone set an example ?

how it works ?

Thanks

Hi,

Ok! this worked within the ReportWindow class:

```
void ReportWindow::edgotoPage(){  
    String s = edP.GetData(); //edP * numeric field  
    int np; // number of page  
    np=StrToInt(s);  
    pg.ScrollInto(np-1,np-1,np,np);  
}
```

note: see the image attached considerations about above routine

as an end result of this topic, if
add a dropdown to navigate between
the pages would look like this image.
