Subject: SqlSchema sch(MY_SQL) compound and or unique indexes

Hi,

so that the schema file (sch) creates an index (compound) just like the sql command is created as

```
CREATE INDEX index1 ON table1(A,B);
 and
CREATE UNIQUE INDEX index2 ON table(C,D);
```

if I leave only with index keyword it will create 4 distinct indexes and my intention is 2 indexes.

sch:

```
TABLE_(TABLE1)
   INT_     (ID)       PRIMARY_KEY
STRING_  (A,  30)  INDEX ?? (1)
STRING_  (B,  30)           INDEX ?? (1)
STRING_  (C, 30)  INDEX ??  UNIQUE? (2)
STRING_  (D, 30)  INDEX ??  UNIQUE? (2)

END_TABLE
```

How i do to create sch with 2 compound indexes ?

thanks

OK , I found index_list and unique_list and work! thanks!

```
TABLE_(TABLE1)
      INT_    (ID)       PRIMARY_KEY
 STRING_  (A,  30)
 STRING_  (B,  30)
 STRING_  (C, 30)
 STRING_  (D, 30)
 INDEX_LIST (NOMEINDICE1,"A, B")
 UNIQUE_LIST(NOMEINDICE2,"C, D")
END_TABLE
```
